 Anakapalle, Vishakapatanam, Andhra Pradesh, 531001

SUMMARY

Data Science and AI enthusiast with hands-on experience in NLP, web scraping, and no-code automation. Currently an Apprentice at BHEL R&D, building real-world solutions using Python, LLMs, and Playwright. Passionate about solving problems using data, automation, and generative AI.

SKILLS

Soft Skills: Communication, Teamwork, Analytical Thinking
Concepts: Data Science Fundamentals, NLP, Sentiment Analysis, Classification Models
Machine Learning: Scikit-learn, SMOTE, Model Evaluation, Data Preprocessing
Generative AI: Prompt Engineering, Custom GPTs, AI Image/Video Generation, LLM Workflows
Automation: Playwright (Web Automation), Make, Zapier (No-code Tools)
Data Tools: MySQL, Pandas, NumPy, Openpyxl, Tableau, Excel (Advanced)
Programming: Python, C/C++, HTML, CSS, JavaScript (basic)

EDUCATION

Vignan Institute Of Information Technology – B.Tech in Information Technology

CGPA: 7.3 | Jul 2024

Tirumala Junior College – Intermediate (MPC)

CGPA: 9.3 | Apr 2020

Bhashyam Public School – 10th Grade

CGPA: 9.3 | Mar 2018

EXPERIENCE

Bharat Heavy Electricals Limited (BHEL) – R&D, Hyderabad

Apprentice | Dec 2024 – Nov 2025

- Contributed to industrial R&D projects by automating document workflows using Python and Playwright.
- Built a scraping automation tool to extract BIS standards using Playwright and stored in MySQL, improving data availability.
- Collaborated with engineers to build Excel reporting automation with Pandas and Openpyxl.
- Increased document handling efficiency by ~60% through Python-based automation solutions.
- Worked with tools like MySQL, Pandas, Playwright, and Excel in a live industrial environment.

PROJECTS

- **Sentiment Analysis with NLP**
Applied natural language processing to classify user reviews by sentiment, improving customer feedback insights as part of an ExcelR capstone project.
- **Inventory Management**
Developed a Python-based inventory management system with machine-learning models to predict stockouts, balance class data with SMOTE, and automate keyword extraction from Excel for faster material classification and stock analysis.
- **Bankruptcy Prevention**
Built a machine-learning model using financial indicators to predict company bankruptcy, featuring data preprocessing, feature engineering, and evaluation of multiple classification algorithms for high accuracy.
- **Solar Power Prediction**
Implemented a forecasting model to predict solar energy output from weather and historical power data, enabling better energy planning and grid management.
- **BIS Standards Scraping Automation**
Created an automated web-scraping solution with Playwright, MySQL, Pandas, and Openpyxl to process and organize Bureau of Indian Standards (BIS) documents for BHEL.

- **Sign Language Recognition**
Trained a custom computer-vision model to recognize and classify sign language gestures from image data, facilitating accessible communication.
 - **Light Sensory Car (IoT Project)**
Designed an IoT-enabled car navigation system using light sensors and microcontroller integration for autonomous movement based on environmental lighting.
 - **Daily Journal (Web App)**
Developed a responsive, browser-based journal application using HTML, CSS, and JavaScript for easy daily note-taking and data storage.
-

CERTIFICATIONS

- Data Science Course – ExcelR
Trained in Python, Statistics, Machine Learning, NLP, Tableau, and Capstone Projects
 - Advanced Google Analytics – Google Careers
Covered data collection, configuration, and advanced analysis techniques
 - Generative AI Mastermind – Outskill (Jul 2025)
Hands-on with LLMs, Custom GPTs, AI image/video generation, and no-code automation using Make and Zapier
 - Basics of Python – Infosys Springboard
Covered core programming concepts, loops, functions, and file handling in Python
 - Communication Skills – TCS iON
Focused on workplace communication, email writing, and presentation skills
-
